

Deco Planter Wood

Description

Herstera Deco Planter collection features planters of various heights and depths that can be connected together. With a clean, linear design, this collection seamlessly fits into any space and environment. The combination of black steel and solid thermo-treated pine wood adds warmth and distinction. When the planters are connected, the structure has no internal walls, promoting natural root growth. Additionally, a wide range of compatible accessories allows for customization to meet the specific needs of each project. Planters feature a base equipped with drainage holes to prevent waterlogging and promote plant health. The adjustable feet included with each planter allow you to level it on uneven ground, ensuring stability and correct drainage. The wooden panel is magnetically installed on the planter box and can be removed from the front using a supplied tool without having to disassemble the planter box.

Available Sizes

Colors

Material & Finish

Body	Hot Dipped Galvanized Steel
Body Thickness	1 mm
Wood Frame Thickness	1.5 mm
Bottom Thickness	1.5 mm
Hardware	Stainless Steel
Powder Coating	Tiger Drylac® Series
Touch	Texturized matte
Wood Panel	Thermo Treated Pine Wood

Materials

Planters are crafted from high-quality hot-dip galvanized steel and coated with Tiger Drylac polyester powder coating. This combined coating system has a C4 high / C5 medium resistance grade to adverse conditions following ISO 12944 standards.

Thermally treated pine wood offers greater stability, resistance to moisture and insects, and increased durability for exterior cladding. Selected for high quality, it has a uniform dark tone, enhances aesthetics, and is sustainable with a chemical-free process.

Planters bring top-notch stainless steel hardware for a long durability.

Illumination Options

Elevate the atmosphere with optional lighting support and magnetic LED strips from Herstera. Illuminate the front of your planter, creating a stunning visual effect that transforms your space.

Interior Protection

To preserve the protective paint coating on the interior of the planter, we recommend using a layer of geotextile felt, such as Herstera felt bags.
